

Power IQ

Manage all of your rack PDUs via a single Web interface.

Platform Options:

- ▶ VMware Virtual Appliance
 - Our application software, database and hardened Linux® operating system is fully tested and ready to load on your VMware® platform
 - Tested with ESX, ESXi and Player
- ▶ Raritan Hardware Appliance
 - Our application software, database and hardened Linux operating system is loaded on our enterprise-class, rack mountable 2U server with dual power supply and redundant fans

Intelligent Power Management

A power management solution that helps you be more energy efficient.

Introducing a solution that manages your rack PDUs through a single web interface.

Power IQ™ – through a single Web interface – simplifies management of and data collection for multiple rack PDUs to help IT and facilities managers improve data center availability, enhance capacity planning and improve energy efficiency. Power IQ provides for accurate IT-device, outlet group-, rack-, branch circuit- and data center-level power, current, voltage, temperature and humidity monitoring as well as remote outlet switching. It simplifies PX configuration and firmware management. Security is ensured with management of standards-based authentication, Web session timeout and IP-based Access control.

Power IQ manages any number of Raritan's Dominion® PX and third-party rack PDUs. The system is open data base compliant (ODBC) and can be integrated with your current data warehouse and enterprise reporting system.

Make Informed Capacity Planning Decisions

Power IQ allows you to accurately monitor and measure key power data. This data can be used to manage current needs as well as help you plan for future data center growth. Capabilities include:

- ▶ Collecting and grouping actual current draw, so you can compare it to rated capacity
- ▶ Collecting and grouping actual power load to update design assumptions
- ▶ Monitoring trends to understand future needs
- ▶ Finding hot spots, allowing you to eliminate them by making informed add and move decisions

Efficiently Utilize Energy

Power IQ provides you with valuable information that can help you gain efficiencies in the data center right away, including:

- ▶ Providing baseline data center energy usage
- ▶ Measuring your energy improvements
- ▶ Understanding which systems are candidates for consolidation
- ▶ Measuring temperatures at the rack to see where adjustments can be made to optimize cooling

Security Is Ensured

- ▶ LDAP/AD integration offers easier centralized authentication
- ▶ Trusted host definitions can be assigned so only named hosts can access the system
- ▶ AES encryption up to 256 bits protects your information

Dominion® PX Is Made Easy

- ▶ Bulk configuration lets you name outlet and set common parameters with ease
- ▶ Firmware management helps track and distribute firmware updates

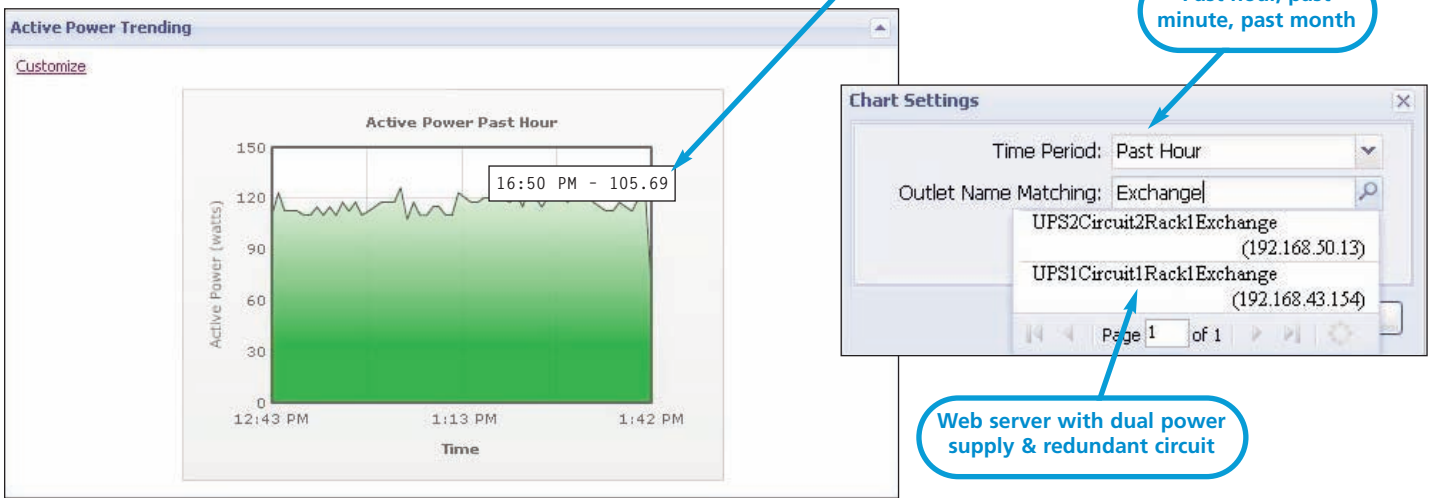

Multivendor Power Data Aggregation

- ▶ User configurable collection intervals ensure desired accuracy while minimizing network traffic
- ▶ Aggregate current, voltage, power factor and active and apparent power data turns data into information

Reporting

- ▶ Standard trending and status reports help you easily see usage trends
- ▶ Open database connectivity capabilities let you use your existing data warehouse and reporting system to generate custom reports

Power trend by circuit, rack, IT device or customer
